PROFILE

Product designer who also builds. I founded Tonyte, a social discovery platform live on Android, iOS and the web, and lead it across product strategy, UX/UI and brand design, React Native and web development, store releases, partnerships and marketing. I am also developing HUNR, a skill-based collaboration platform, as an independent product. Strong in user-centred design, user flows, prototyping, design systems and branding, and experienced in evaluating and improving AI-generated interfaces using usability principles and visual hierarchy. Studying Media Computer Science at HTW Dresden.

PROFESSIONAL EXPERIENCE

Tonyte · Founder

2026 – Present

Dresden, Germany

tonyte.app

Social discovery platform that helps students, newcomers, locals and visitors in Dresden discover events, meet people with shared interests and make plans together. Released on Android and iOS, with a public website and a partner platform for communities, organizers and venues.

PRODUCT & DESIGN

- Created the name, brand identity and design system (typography, colour, components, motion) used across the mobile apps, website, partner dashboard and marketing.
- Designed complete user journeys in Figma: onboarding, event feed and map, community plans, chat, profiles, verification and the partner portal.
- Designed trust and safety features for meeting new people: join requests for plans, meeting location shared only after approval, optional student and identity verification, reporting and blocking.
- Designed StudiZone, a verified student layer with student-only events, plans and chats.

ENGINEERING & RELEASES

- Built and released the Android and iOS apps in React Native and TypeScript on Firebase (Authentication, Firestore, Cloud Functions), covering implementation, testing, device-specific debugging, store submissions and ongoing updates.
- Built and maintain tonyte.app: the landing experience, a public event map, five languages, and a partner portal where organizers create accounts, publish events and view engagement.
- Built a calendar integration that imports a partner's existing event calendar into Tonyte as drafts for review.

PARTNERSHIPS & GROWTH

- Identify, contact and pitch Dresden communities, organizers and venues, and meet prospective partners to onboard them onto the platform.
- Plan and produce Tonyte's Instagram content (launch campaign, posts, reels, event carousels, captions) and campus print materials.
- Iterate on the product continuously based on user feedback and real-world use.

Skill-based collaboration platform that helps homemakers, retirees, people in mid-life and first-time entrepreneurs find collaborators and communities and turn their ideas into something they build together. Pre-launch.

- Defined the product concept, name and a warm, handmade visual identity for an audience that is often underserved by professional networking tools.
- Designed an onboarding that starts from everyday skills rather than job titles, one question per step, and idea cards that show what each person brings and what they are looking for.
- Built the web app in React, TypeScript and Tailwind CSS on Firebase: authentication, onboarding, idea feed, people discovery, connections, one-to-one messaging and notifications, secured with Firestore rules.
- Developing a React Native (Expo) version on the same backend.

TECHNICAL SKILLS

UX / Product Design

User experience and interface design, user-centred design, user research, information architecture, user flows, wireframing, interactive prototyping, design systems, accessibility, responsive design, usability evaluation, interaction design, visual hierarchy, typography, branding

Design Tools

Figma (Auto Layout, components and variants, interactive prototypes), Adobe Photoshop, Adobe Illustrator

Soft Skills

Product thinking, design critique, cross-functional collaboration, problem solving, communication, attention to detail, agile development

Development

React, React Native, TypeScript, JavaScript, HTML, CSS, Tailwind CSS, Firebase, REST APIs, Git

AI Tools

Claude Code, Google AI Studio, Google Flow, ChatGPT, Codex, Cursor

EDUCATION

B.Sc. Media Computer Science (Medieninformatik)

HTW Dresden, Germany

Relevant coursework: Human–Computer Interaction, Interactive Interface Design, Software Engineering, Database Systems, Computer Graphics

Languages

English (C1), German (C1)
